<Highlight 2>: Identifying sites for eco tourism

An exercise was undertaken (22<sup>nd</sup> Nov to 1<sup>st</sup> Dec) to identify potential hotspots (spots rich in birds, butterflies, reptiles and amphibians) for ecotourism. The exercise was undertaken with the help of a tourism entrepreneur, Mr. Sushil Chikane, Director, Journeys (<u>http://yourjourneys.co.in/</u>). The participants trained for bird and butterfly identification, to be potential guides, were present during the exercise. The participants were appraised about the importance of ecotourism for conservation, aspects of hospitality towards the tourists, identification of areas for sighting of various species of fauna, night trails and sustainable eco-tourism. The concepts of bird studios were also discussed with the communities.

## <Highlight 3>: Bird survey

A survey of birds was carried out from the 8<sup>th</sup> to the 16<sup>th</sup> of December by Dhananjai Mohan a Himalayan bird expert and forest officer. The bird list for the three villages now numbers well over 200 species. Interesting sightings on this visit included the first sighting of whiteheaded morph of Black bulbul from Nagaland. Only other published records are of 2 sightings from Namdapha in 2009. Also for the first time a flock of Greyheaded Parakeets were seen from Sukhai-they had earlier been sighted lower down at Ghosu sanctuary. Moreover, this year the Amur falcons known for their spectacular migration to Wokha were also sighted in good numbers in the study villages (e.g. Kivikhu).

<Highlight 4>: A possible new range extension to India-the moth species Krananda lucidaria Leech, 1897!

This moth was seen on 29 Sept, 2017 at Kivikhu village in Zunheboto. The Geographical range is W. and S. China, N. Thailand, Peninsular Malaysia, Sumatra and Borneo and may be a range extension to India.

<Highlight 4>: Review of photo documentation by the local communities
In the previous visits the communities were asked to photo document the biodiversity of their area and maintain a register of their sightings. During this quarter their record keeping was reviewed and species identified and listed.

<Highlight 4>: Successful patrolling by local communities

It was observed that the local communities are actively patrolling their forests and effectively imposing fines. A raid was conducted on the night of 22 November, 2017 at the Tizu river where miscreants were found fishing and collecting beetles. These people were not from the local villages and their equipment was immediately confiscated. The suspects were also given a summons by the Sukhai village chairman and were asked to be present at the village court, where they were fined a sum of INR 25000.

<Highlight 6>: Discussions with communities of Village Chepokita, a Chakesang tribe village

A discussion was conducted with the Chakesang communities of Chepokita village, a village neighboring Kivikhu who also use the Tizu river. The idea was to encourage this village to join in the joint conservation of the Tizu river and neighbouring forests. The communities were eager to understand the project and understand how they could participate in the project and work towards conservation. During the meeting, the key objectives of the project and the work undertaken in 3 villages were discussed with the communities. The communities appreciated the work undertaken by TERI and expressed their interest to participate in the project.
