

Satoyama Dialogue: Tools, Technology & People

Conservation International and Live and Learn are hosting a “side event” to foster discussions among the participants to the IPSI Regional Workshop on two specific topics. The Indicators of Resilience in SEPLS is a tool developed by IPSI members that can be used to assess and strengthen the resilience of SEPLS in changing environmental and social conditions. Projects such as COMDEKS and GEF-Satoyama Project are using the Indicators to monitor the projects’ interventions and to improve community resilience. The first part is an opportunity to hear directly from partners who have used or plan to use the Indicators. In collaboration with like-minded partners of the IPSI network, there is a potential for global contribution in sustainable development. The second part of the side event will explore the possibility of information technology on knowledge and experience sharing.

Venue: Mahua Room
